

Knet MaaS for Financial Services Powered by Fiberlink's MaaS360

KNet MaaS in Action: SEC Satisfaction with Selective Wipe

A personal finance representative selling insurance, annuities and mutual funds for a leading company meets with clients at their locations. The rep relies on an iPad to present products and capture client information, which is then uploaded to the company's office systems. Operating in a major metropolitan area, the rep uses taxis to travel to appointments, but on one hectic day, the rep leaves the iPad in a taxi.

The rep first reports the incident to the company's IT department, which promptly locks the iPad remotely from their single KNet MaaS console. Unable to retrieve the device in the specified amount of time per company policy, the IT department—again from their KNet MaaS console—wipes all information from the iPad.

Challenges for Financial Services

Financial services companies operate in a highly regulated and security sensitive environment. FINRA (Financial Industry Regulatory Authority), SEC Regulation S-P (Safeguards Rule), SOX (Sarbanes-Oxley Act) and other mandates governing data handling apply to mobile devices, increasing security and compliance risks.

Yet employees want specific devices—increasingly, personally-owned devices—to maximize their job performance and productivity. The unavoidable consumerization of IT presents significant challenges to most firms' existing mobile policies and IT workloads.

The drain on IT resources to support all mobile platforms can be overwhelming—and expensive. And efforts can still fall short of your organization's information security and compliance policies.

KNet MaaS Financial Services Solution – Powered by MaaS360

KNet MaaS for Financial Services gives you the fastest time-to-solve your mobile security challenges in the industry by enabling companies to safely embrace workforce mobility trends with a robust and mature platform for controlling security and compliance on all enterprise and employee devices.

Using KNet MaaS, Mobile Device Management (MDM), Mobile Application Management (MAM), and document and expense management can be easily and instantly integrated into broader enterprise programs for IT governance, data security and regulatory compliance.

Key Benefits

- Gain 360° visibility and control of all mobile devices, apps, documents and files
- Automate password, encryption and policy enforcement
- Ensure anytime, anywhere device and data security with immediate remote action on nonconforming devices
- No infrastructure changes required
- Rapid implementation
- Low implementation costs and no-fuss maintenance
- Expense management to control costs

Key Features

- Supports today's mobile devices from a single console, including iPhone, iPad, Android, Windows Phone, BlackBerry and Kindle Fire
- Instant device enrollment via SMS, email or URL over-the-air (OTA)
- Pushed policies, encryption and security safeguards
- Contextual, event-based policy, security and compliance rules engine and automation
- Enforce usage policies specific to departments or teams
- Remote locate, lock and wipe (full and selective)
- Application and document management
- Blacklisting, whitelisting and requiring apps
- Customized app catalog
- Support for custom apps
- Control document distribution and versioning on all devices
- Real-time reporting and analytics

KNet MaaS for Financial Services

Control All Devices

KNet MaaS gives financial services firms coordinated visibility and control over all devices and operating systems, from Apple iOS to Android, Windows Phone and BlackBerry. Integrated dashboards, analytics and reporting provide actionable intelligence about their entire mobile environment through a single console. IT administrators can quickly visualize the distribution of devices, apps and documents across platforms, approval status, device capabilities, ownership, compliance status and more to control workforce mobility risks.

Improve Mobile Information Security and Proof of Regulatory Compliance

KNet MaaS provides the ability to know and control information security safeguards on all mobile devices—and react rapidly to lost or stolen devices to ensure regulatory compliance with FINRA, Safeguards Rule, SOX, FRCP (Federal Rules of Civil Procedure), PCI DSS (Payment Card Industry Data Security Standard), U.S. Patriot Act and other statutes. IT departments can:

- Push policies and Wi-Fi, email and VPN profiles OTA
- Quarantine new devices automatically until authorized to access your network
- Enforce passcode protection, encryption, and security updates
- Remotely locate, block or wipe (full and selective) devices lost, stolen or no longer authorized
- Blacklist applications and block device access

Control Mobile Applications

KNet MaaS application management allows financial services organizations to easily manage and secure the applications that are critical to your users. An on-device application provides users with a catalog of authorized private and public apps. Users can view the apps made available to them, install apps, and be alerted to updates. IT and other departments can manage the master app catalog and per-user authorization. App lifecycle management provides real-time software inventory reports, app distribution and installation tracking, update publishing, provisioning profile management, and app security and compliance management.

Reduce IT Workload and Costs

With KNet MaaS's 100% cloud-based platform, there are no servers to install, no complex configurations or infrastructure changes, and no investment in expensive business software. Built on a secure, multi-tenant cloud architecture, MaaS360 enables instant enterprise mobility management in just minutes with effortless scalability, whether from ten to tens of thousands of users, and seamless integration into existing enterprise systems. Additionally, KNet MaaS eliminates the strain and expense that rapidly changing mobile devices and apps can have on IT organizations by automatically incorporating the continuous stream of platform updates.

Why KNet MaaS?

Proven approach to cloud-based mobility management

Powerful management & security to address the full mobility lifecycle

Seamlessly integrates with all of your existing infrastructure

Simple & fast with an exceptional customer experience
