

Knet MaaS Secure Document Sharing Powered by Fiberlink's MaaS360®

Distribute and secure documents on mobile devices from the cloud

Control, Edit and Share Documents on Mobile Devices

Employees demand access to content anytime, anywhere, from their mobile devices. For companies, however, this introduces significant compliance risks if the proper controls to protect this information are not in place.

Organizations of all sizes need a simple, scalable way to distribute, manage and secure documents on smartphones and tablets. Users need to be able to view, edit and share documents on the go with colleagues and customers.

And they all need to address the key concerns of data loss and how to prevent it, while enjoying the benefits of increased productivity and collaboration on mobile devices.

KNet MaaS Secure Document Sharing simplifies the delivery, creation and sharing of documents on mobile devices by providing a secure, encrypted container and productivity suite, giving administrators the control they need and employees the access they demand.

The use cases for secure sharing and editing of documents are endless for your organization, whether in Sales, Marketing, Operations or Finance:

- Edit and share last minute changes to a sales presentation on the go, right before a customer meeting
- Collaborate on the latest financials in a spreadsheet before boarding a plane
- Brainstorm marketing messages and share with colleagues while in a cafe
- Distribute quarterly financial documents to the Board of Directors, and set the document to expire after the meeting
- Update the product materials in real-time to sales teams so they don't need to scramble to find the latest data sheet or competitive information
- Ensure tablets in retail stores have the most up-to-date product and inventory information

Enterprise Document Container

KNet MaaS Secure Document Sharing is a fully integrated, protected suite of office productivity tools to view, edit & share content.

Enterprise Document Catalog

An intuitive, enterprise document catalog for iOS & Android devices.

Document Lifecycle Management

A platform for administrators to distribute, update, manage & secure documents. Users can securely view, create, edit & share documents on mobile devices.

Document Security

An encrypted document container with full operational & security management.

Document Compliance & Enforcement

Data loss prevention controls to protect documents from unauthorized distribution.

KNet MaaS Doc Cloud

An option to host & distribute corporate documents on a globally optimized content distribution network.

Integration with Existing Services

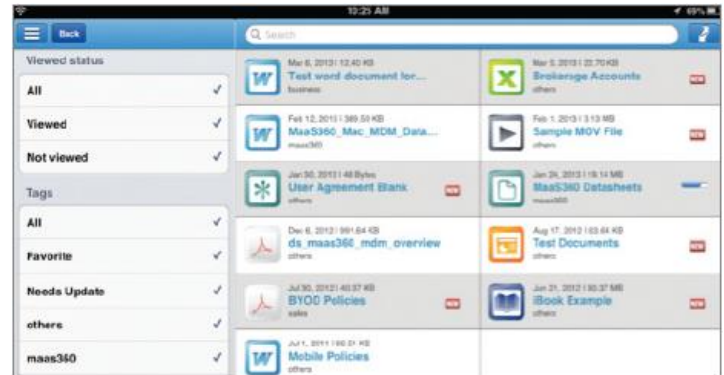

Seamless integration with KNet MaaS Secure Mail & corporate file shares, such as SharePoint & Box, to enable effortless collaboration.

Key Benefits

- Protect corporate documents with full containerization
- Increase employee productivity & satisfaction
- Safely & securely support BYOD
- Separate personal & corporate data
- Reduce risk of sensitive data leakage
- Secure email attachments
- Centrally manage document distribution
- Experience consistent & seamless workflows for iOS & Android devices
- Perform a selective wipe of document catalog & managed documents
- Reduce network load & increase download performance & scalability

Enterprise Document Catalog

- Provide an intuitive, contained, enterprise document catalog for iOS and Android devices
- Deliver an exceptional user experience with icons, descriptions & other details
- Alert users to view & download available documents
- Work with all common file types including Word, Excel, PowerPoint, text & PDF formats as well as web, video & audio files
- Manage different versions of the same document
- Use a secure, web-based console

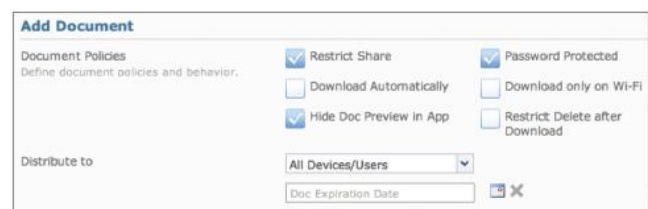

| Document | Available ... | Type | File Size | Tags | Downloads | Password Protected |
|----------------------|---------------|---|------------|---------|-----------|--------------------|
| MaaS360 Datasheets | All |  | 19.14 MB | maas360 | 6 | No |
| iBook Example | All |  | 60.37 MB | Others | 5 | No |
| BYOD Policies | All |  | 40.38 KB | sales | 5 | No |
| Brokerage Accounts | All |  | 22.7 KB | Others | 5 | Yes |
| Test Documents | All |  | 63.64 KB | Others | 4 | No |
| User Agreement Blank | All |  | 49.0 Bytes | Others | 4 | No |
| Sample MOV File | All |  | 3.13 MB | Others | 4 | No |

Document Lifecycle Management

- Leverage best practice document management workflows
- Distribute documents & track their download over-the-air to all users, groups of users or individual devices
- Not just view, but create, edit & save content securely, all in an encrypted container
- Access content via KNet MaaS Secure Mail & corporate file shares such as SharePoint & Box
- Set time-based expirations for document deletion
- Reference real-time document inventory

Document Security

- Easily configure a specific security policy for each document
- Enable required authentication
- Leverage native device encryption to secure sensitive data
- Specify automatic download & download only on Wi-Fi
- Restrict sharing, printing, copying & pasting outside container
- Hide document preview & prevent deletion after download
- Enforce device compliance checks

Add Document

Document Policies
Define document policies and behavior.
