

Knet MaaS Secure Mail

Powered by Fiberlink's MaaS360®

Control enterprise email on mobile devices

Contain Corporate Email

Email is still the killer app on smartphones and tablets, but can be a killer to your organization's mobile security and compliance policies, too.

KNet MaaS safeguards business email and attachments to prevent corporate data leaks while keeping your employees productive on the go.

Key Features

- Secure emails (both text and attachments), calendars and contacts in a container
- Enable authentication & block unauthorized email access
- Conduct online and offline compliance checks prior to accessing email
- Leverage FIPS 140-2 compliant, AES-256 encryption for both iOS and Android
- View attachments directly in the app
- Control where files can be copied or moved
- Restrict forwarding, moving to other apps, copying, pasting, & screen capture
- Selectively wipe attachments, even outside of email
- Work in the KNet MaaS Secure Productivity Suite to store, view, edit & share content

Key Benefits

- Safely & securely support BYOD
- Separate personal & corporate data
- Reduce risk of sensitive data leakage
- Leverage single sign-on for authentication
- Enable online & offline compliance checks
- Wipe email container, enterprise profiles, or whole device
- Deliver a simple, intuitive user interface that won't slow your workers down
- KNet MaaS has no access to confidential email data
- Not inline with email data with no performance or outage risks

Provide Secure Access to Corporate Email

KNet MaaS Secure Mail delivers a secure office productivity app with email, calendar and contacts to allow employees to securely collaborate with colleagues while preserving the mobile experience on their personal devices.

As a foundational component of the KNet MaaS Secure Productivity Suite, it addresses key concerns of data loss risks.

Through authentication and authorization, only approved, valid users can access sensitive emails and data. With policies to control the flow of data, you can restrict sharing by users, forwarding of attachments and copying and pasting. Devices that are lost, stolen or compromised can be selectively wiped to remove the secure email container, all attachments and profiles.

Choose the Right Approach to Securing Email

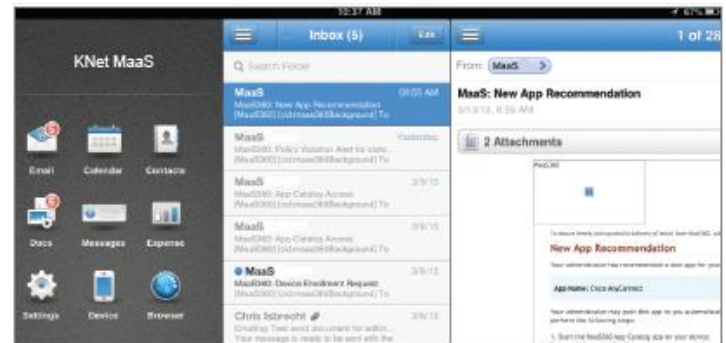

Other solutions secure email by intercepting the email stream, removing attachments and loading them in a separate application. This ultimately leads to disjointed user experiences between the native email client and standalone applications that may just provide document viewing.

KNet MaaS Secure Mail works seamlessly within the KNet MaaS Secure Productivity Suite to manage all emails, calendars, contacts, apps, documents and the Web from one isolated workspace on their mobile devices.

Users can stay productive with a consistent user experience from email handling to viewing, editing and sharing documents.

Full Personal Information Manager (PIM) App

- Secure email, calendar & contacts
- Provide authentication & block unauthorized email access
- Control emails & attachments in container
- View attachments directly in app
- Not just view, but create, edit, save & share content securely in encrypted KNet MaaS Secure Productivity Suite
- Work with all common file types including Word, Excel, PowerPoint, text & PDF formats

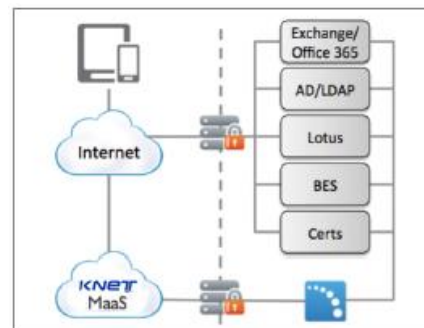

Strong Data Loss Prevention

- Control where files can be copied or moved
- Restrict forwarding & moving to other apps
- Disable copy, paste & screen capture
- Secure not just email attachments but email text as well
- Enforce device compliance checks
- Selectively wipe container and attachments, even outside of email

Seamless Integration with Your Infrastructure

- Leverage existing Exchange ActiveSync infrastructure
- Use Active Directory to simplify authentication & authorization
- Support for Cloud email such as Office 365 & Gmail
- Integrate comprehensive email security at the device level that is not in line with email data
- KNet MaaS has no access to confidential email data
- No additional performance or outage risks

Real-Time Security Alerts & Reports

- Configure automated compliance enforcement actions
- Receive real-time alerts of compliance violations
- Take instant action through automation or manual intervention
- View graphical reports of security & compliance history
